

daa's Healthy Local Environment Policy provides a foundation for a more sustainable future for our group activities, with a focus on Air Quality, Surface Water Quality, Water Consumption, Noise and Biodiversity. daa is committed to minimising the impact of our activities on the environment and local ecosystems. We will do this by monitoring air quality, reducing our water consumption, aligning with best practice in noise management and supporting nature to flourish. We understand that the delivery of impactful initiatives, compliance with regulation and ongoing engagement with our operators and regulators, are key to achieving a more sustainable future and a healthy local environment.

## Scope of Policy

To do this, we will;

- Review objectives, targets and performance related to air, water, noise and biodiversity, on at least an annual basis;
- Comply with all relevant regulatory requirements related to air, water, noise and biodiversity;
- Continuously seek to improve our practices in relation to air quality, water, noise and biodiversity management;
- Routinely monitor the air and water quality at our aerodromes and report on the outcomes with relevant stakeholders as applicable;
- Ensure that all pollution and contamination incidents are appropriately reported and addressed in an efficient and timely manner to reduce their impact on the business and local environments;
- Transition our infrastructure and operations away from fossil fuels in order to improve local air quality;
- Design for proper and efficient water management in infrastructure and refurbishment projects, including the reuse of water where possible;
- Consider biodiversity and air and water quality impacts and ensure improvements are factored into infrastructure and refurbishment projects;
- Develop campus level biodiversity action plans to compensate for the operational impact of our activities and support nature to flourish at our sites;
- Provide training and guidance for management, staff, operators and stakeholders on critical issues related to air, water, noise, biodiversity and pollution prevention;
- Collaborate with internal and external stakeholders, across supply chain, to reduce or improve air and water quality, water use, noise and environmental impact;
- Ensure organisational compliance with the Airport Environmental Direction, and the programme of Environmental Audits;
- Provide the necessary information and resources to achieve our objectives and targets.

By implementing this approach, our operations will see improved air quality, reduce water consumption and ensure a considered approach to biodiversity, creating a healthy local environment. All daa colleagues, as well as on-site Contractors/Suppliers working on our behalf have a role to play in supporting healthy local environments. All daa business units are responsible for compliance with this policy as appropriate to their business operations.

This policy is shared with our colleagues within the organisation and is available to the public and other interested parties via our website. The policy is reviewed annually and updated as necessary.
