

daa's Decarbonisation Policy sets the foundation for a more sustainable future for our Group activities, with a focus on reducing our organisational energy use and carbon emissions. daa is committed to reaching and maintaining 90% absolute CO2e emissions reductions in Scope 1 and 2 and commit to Net Zero in Scope 3 by 2050, or sooner. daa is committed to minimising the impact of our activities on the environment and targeting holistic energy efficiency improvements and greenhouse gas emission reductions across our operations and areas of influence. To do this we will continually evaluate new energy alternatives that support the requirements of our business, reduce our reliance on fossil fuels, and develop a new generation of on-site renewable energy options. Additionally, we will continually seek to engage with our key partners and stakeholders to reduce the carbon emissions associated with the activities that take place within our value chain.

Scope of Policy

To do this, we will;

- Comply with all relevant regulatory requirements related to decarbonisation, energy efficiency, and energy use;
- Review energy and carbon objectives, targets and performance, on at least an annual basis;
- Gather data from our scope 1, 2 and 3 emissions to monitor and report on progress on at least an annual basis;
- Continuously improve energy efficiency, through effective energy management practices, processes and systems;
- Maintain, operate, and continually improve an Energy Management System at our Airports in line with ISO50001 as applicable;
- Incorporate energy-efficient design into our infrastructure and refurbishment projects, and maintain EXEED Managed certification for the relevant building assets in our portfolio;
- Procure the most energy and carbon-efficient equipment, products, and services, including the ongoing procurement of green electricity at our Airport's;
- Continually seek to invest in on-site renewable energy generation across our campuses and infrastructure.
- Prioritise the use of alternative energy across our operations, including fuelling and transport;
- Provide training and guidance for management, staff, operators and stakeholder on energy efficiency, effective energy management and carbon emissions reduction.;
- Communicate regularly with internal and external stakeholders on our energy and decarbonisation ambitions, achievements, and the role that they play in achieving these commitments;
- Collaborate with our internal and external stakeholders across the supply chain, to identify opportunities to decarbonise our Scope 3 emissions across our organisation and operations;
- Allocate the necessary resources to achieve our energy objectives and targets.

By implementing this approach, we will achieve reductions in the Scope 1 & 2 emissions under our direct control but also related to the Scope 3 emissions under our influence. All daa colleagues, as well as on-site Contractors/Suppliers working on our behalf have a role to play in conserving energy. We are all responsible to efficiently use energy which is under their direct control.

All daa business units are responsible for compliance with this policy as appropriate to their business operations

This policy is shared with our colleagues within the organisation and is available to the public and other interested parties on our website. The policy is reviewed annually and updated as necessary.

Nicholas Cole
Deputy Chief Executive Officer
